CSC 191 Midterm
Sample Questions
Views

• We have been asked to recreate part of the Bank of America webpage in a BoA app – the signin screen

• Indicate which Views you could employ to implement the functionality, as close as possible to that offered by the current website.
Views

- For the app at right, list each type of View that is being employed.
- Choose either the linear layout or relative layout and describe how the layout shown could be generated.
Views

True or False:

_____ Checkboxes are appropriate when we need to limit a user to choosing one out of multiple values

Explanation of T/F choice:

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
Label-Value Pairs

- In class, we have discussed (numerous times) the idea of storing “label-value” pairs. Choose one of the scenarios where this has come up and briefly describe the scenario.
